Notes to Appendix A:

1/ The information in the first group of columns, the third column, the fourth group of columns and the fifth column is taken from the BOOK OF THE STATES 1976-77 pp. 42-43, 604-59 (1967). The information in the second column comes from a survey of the relevant constitutions. The information in the sixth group of columns is obtained by dividing the total area of the state (column 5) by the number of members in each legislative house (column 1). The information in the final column comes from the INFORMATION PLEASE ALMANAC: ATLAS AND YEARBOOK 1976 p. 59 (A. Golenpaul ed. 1976) and is based on 1974 U.S. Bureau of Labor Statistics.

(a) These population estimates are based on data from the U.S. Bureau of the Census for July 1, 1973.

(b) The population estimates used to compute the numbers in this column are based in most instances on the 1970 census.

(c) The size of the Congress of Micronesia is prescribed by Secretarial Order No. 2918.

(d) These population estimates are based on the number of registered voters in the state.

APPENDIX B.

60	259	53	4	3	1 (.4%)	-31 (12.0%)	9 (3.5%)	15.5%

The fourth group of columns shows the deviation from the uniform number that occurs when the best allocation is made.

The last column shows the maximum deviation which is one of the statistics the court considers in determining whether the apportionment meets constitutional standards.

The numbers for total seats used in this table are arbitrary and the maximum deviation would vary greatly for the numbers within each interval. For example:
